Education

Computer Science with Artificial Intelligence BSc, University of Nottingham (2023–2026)

- Upper Second-Class Honours (2:1): 64% Overall
- Relevant Modules: Computer Vision (69%), Languages and Computation (76%), Human Computer Interaction (75%), Computer Security (67%), Human-AI Interaction (64%), Operating Systems & Concurrency (65%)

Ashmole Academy, London (2015–2022)

- 3 A-Levels: Math B, Product Design A, Physics C
- 10 GCSE's: 9-6, Including Physics: 9: Math, Chemistry & Product Design: 8

Relevant Experience

Human Computer Interaction Project- Mobile App Design (2022- 2023)

- Achieved 75% in a second-year module focused on Human Computer Interactions
- Designed and prototyped a mobile application in Figma, applying usability heuristics and user-centred design principles.
- Conducted thorough user testing on 3 participants and incorporated feedback to refine interface design and improve accessibility.

Human Computer Collaboration and Communication Project Mobile App Design (2022 -2023)

- Designed Artefact Quest, a collaborative museum app in Figma for school groups, translating the needs of students and teachers into separate user journeys and role specific interfaces.
- Built a interactive prototype covering the end-to-end museum experience, including onboarding, artefact discovery, shared group progress, quizzes and teacher monitoring.
- Applied user-centred design principles and UX research to inform interface decisions, creating a simple experience tailored to younger users while supporting collaborative group interaction.

Data Visualisation and Sonification Project – PCP Graph (2024 - 2025)

- Collaborated in a 1-year team project developing an interactive web-based interface to present data through the unification of visual and auditory representations.
- Developed and designed a predictive parallel coordinates plot to visualise diabetes patient data.
- Took initiative in a group of 8, communicating and presenting a pitch video, final report and final presentation.

Software Engineering Project (January-July 2024)

- Applied core software engineering principles, including agile, to help lead the development of a team project.
- Developed leadership and organizational skills by managing a diverse group of 6 team members and tasks.
- Implemented Java and JUnit to design and test software solutions.

Work Experience

Delivery Driver, Holtwhites Bakery (July-September 2024)

- Managed daily delivery routes, guaranteeing timely and accurate delivery to 5+ businesses.
- Took full responsibility for the packaging of 200 products, maintaining proper handling and presentation for delivery.

Abercrombie & Fitch – Covent Garden, London (2026-)

- Advised customers with queries or styling advice, ensuring a positive shopping experience.
- Managed deliveries of 200+ items, ensuring accurate stock management and store operation.

Technical Skills

- **AI & Machine Learning**: LLM-assisted development, prompt engineering
- **Web Development**: JavaScript, HTML5, CSS3, React, REST APIs, D3.js
- **Programming**: Java, Python, SQL, C, MATLAB
- **Tools & Technologies**: Git/GitHub, FastAPI, Figma, Supabase, VS Code, IntelliJ, Eclipse
- **Software Engineering**: Agile Development, JUnit, MVC, API Integration, UI/UX Design
-

Volunteering and Additional Achievements

Code Ninjas Enfield (July-September 2023)

- Strengthened ability to explain coding concepts to groups of 5-10 children.
- Gained experience in explaining core Java concepts while applying and reinforcing knowledge acquired at university.

Duke of Edinburgh Scheme: Bronze Award (June 2020)

- Engaged in activities, including volunteering, physical challenges, and expeditions.
- Delivered a group presentation in front of 80 students, on what was learned during the scheme.
